Education

B.Tech Computer Science & Engineering

Rungta College of Engineering and Technology 2022 – 2026

Experience

Azure Student Intern — Microsoft May 2025 – May 2026

- Built cloud-native backend services using Azure App Services and AKS improving system scalability.
- Designed CI/CD pipelines reducing deployment time by **30–50%**.
- Containerized applications using Docker and Kubernetes ensuring **100% deployment consistency**.
- Implemented RBAC, Azure AD, and Key Vault enhancing security and access control.

Founder — DevSync Open Source Jan 2025 – Jan 2026

- Built backend platform enabling collaboration across **15+ repositories**.
- Reduced developer onboarding time by **2–5x** using Dockerized environments.
- Designed RBAC and optimized database queries improving system performance.

Gold Microsoft Student Ambassador Sep 2023 – Present

- Mentored **300+ students** across multiple colleges on cloud, backend, and AI technologies.
- Helped **10–15+ students** successfully join Microsoft Learn Student Ambassadors community.
- Built ML-backed backend systems and presented solutions to **2+ stakeholders (TCS, NAAC)**.

Projects

Voyar — E-commerce Backend API

github.com/Sayan-dev731/Voyar

- Built production-grade REST APIs handling **100% order lifecycle**.
- Integrated **2+ APIs** (Razorpay, Shiprocket) for payments and logistics.
- Implemented JWT, RBAC, and OWASP security reducing common vulnerabilities.
- Outcome: Developed scalable backend simulating real-world e-commerce systems.

DevSync Open Source Platform

github.com/Sayan-dev731/devsync-opensource

- Developed backend supporting collaboration across **15+ repositories**.
- Containerized services improving deployment consistency and onboarding speed.
- Outcome: Improved contributor efficiency and reduced setup friction.

Azure Document Analyzer

github.com/Sayan-dev731/document-analyzer

- Built backend APIs for automated document processing using Azure AI.
- Reduced manual processing effort by **70–90%**.
- Outcome: Enabled real-time document analysis workflows.

Zenith — Disease Prediction System

- Developed ML models and deployed real-time inference pipelines.
- Validated with real users and pitched to **2 enterprise stakeholders**.
- Outcome: Achieved strong real-world validation and feedback.

Skills

Programming: Python, JavaScript, Java, C, C++

Backend: Node.js, Express.js, REST APIs, JWT, RBAC

Databases: MongoDB, MySQL

Cloud & DevOps: Azure, AKS, Docker, Kubernetes, CI/CD

Tools: Git, Postman, Linux

Certifications

- Microsoft Azure AI Fundamentals
- MongoDB Developer Toolkit
- Postman API Fundamentals
- GitHub Actions
- Google Cloud AI/ML
- AWS Cloud Essentials
- AWS Solutions Architecture
- micro1 Backend Engineer

Competitions

- Runner Up — Smart India Hackathon (SIH) 2023
- Top 5 (Global Rank) — IIT Bombay Techfest Meshmerize Competition
- Top 25 — Buzz On Earth Hackathon, IIT Kanpur
